

## TIPS FOR URINE COLLECTION:

- The 1st urine of the day is always best
- Always try to catch the urine mid-stream. If sample was obtained from a floor or other surfaces, please let us know.
- Always use a clean leak proof container (we can provide one for you).
- One sample is sufficient, do not mix samples throughout the day.
- Please keep your pet's urine sample refrigerated until you can bring it in.
- Samples need to be less than 12 hours old.
- The Fresher the sample the better. (Older samples degrade quickly, and can give inaccurate results).
- For Cats: a special non-absorbent litter can be provided to you. (You empty and completely clean your litter box, then put the "No-Sorb" litter in the box). The urine can then be poured into a clean container.
- Urine samples will only be accepted M-F between 8am-7pm.
